

ANY PROBLEMS?

Well the Little Plumber products do not work overnight, it can take up to six weeks for you to experience all the benefits listed above, so be patient. Sometimes there's a lot of scale to gradually disperse from your pipes, but once that's all gone you will be enjoying all the benefits of softer water that still retains all the healthy minerals you need like calcium - Good for Bones! Teeth! - Good for growing kids!!

NOTHING ELSE TO DO?

That's it - fit and forget and as long as the Little Plumber is winkingLittle Plumber is working.

GUARANTEES

...Our aim is "To provide the very best products at affordable prices."

If however you are not completely satisfied you may return the unit to us up to 12 months from the date purchased and providing the unit has not been opened or altered you will receive a FULL REFUND. In addition, each LP unit has a full 3 year guarantee against defective workmanship so if you have a problem, simply return it to us and we will replace or repair the product for you.

A GREEN PRODUCT

The Little Plumber units fit into this ethos perfectly, representing excellent value for money without compromise. The LP1 and the larger LP2 incorporate the finest features from the best existing units and combine these into a unique and compact product. They have been skillfully designed to be the best and if you find another unit with a similar specification be prepared to pay about twice the price.

Why green? With water that precipitates limescale, you are paying to heat both the water and the limescale because the limescale acts as an insulation on the heating elements. Electricity is therefore being wasted which is bad for the environment. Not to mention costing you, the consumer, a fortune.

Add to this the fact that hard water and limescale add considerably to the cost of running washing machines and dishwashers PLUS the fact that these appliances have a much shorter life in hard water areas and you can see that the cost of buying and running a Little Plumber not only saves you money but also helps the environment. The cost of running a Little Plumber is currently around \$5 a year.

Little Plumber Electronic Scale Treatment Installation Instructions

Please read these instructions carefully before attempting installation - if you have any problems please call – 267-249-5586.

You should have received:

- 1 x Little Plumber Unit
- 1 set of Cable Ties
- 2 x Wall plugs
- 2 x Screws
- 1 x 110v/9v Adapter (UL approved)

Your new Little Plumber is manufactured to the very high standard in our factory in Oxford, England and will provide you with years of excellent service if it is installed correctly. Please take the time to read these installation instructions carefully.

The first thing to do is to make sure you have bought the correct unit. The LP1 treats a normal 4 bed house, the LP2 a 5-7 bed house and the LP3 an 8-10 bed house.

Please remember that the effect of the LP unit travels **both up stream and down stream** and its effect has absolutely nothing to do with the direction of the water. It treats ALL the water in the pipes wherever you install it.

You can if you wish install a DEDICATED LP1 unit on the cold feed to the hot water tank but generally one unit will treat the whole house. If you have more than one water heater then each heater should have a dedicated LP1 and these should be fitted within 5 feet of the heater.

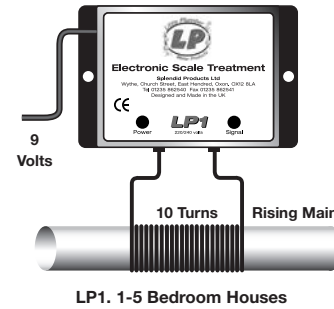

INSTALLATION OF LP1

Decide exactly where the unit or units are to be installed, ensuring that once the aerial wire is secured to the pipe there is enough spare wire left to plug the ends into the sockets. You will need at least 10 aerial turns for best effect. Simply wind the aerial around the pipe which is being treated and secure both ends with a cable tie, as shown in the diagram.

Now, it doesn't matter what the pipe is made of as LP units treat all pipe materials. Nor does it matter whether the LP unit is on its side or upside down. It will still work.

IT'S SO EASY TO FIT YOUR LP

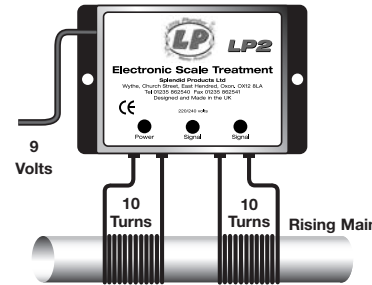

Any spare aerial left over can be wrapped back over the first windings if you are short of space.

LP1. 1-5 Bedroom Houses

INSTALLATION OF LP2

The LP2 has a much stronger output than the LP1 and has two aerials. Simply repeat the installation procedure as with the LP1 except you will now have 2 aerial loops on your pipe. It is possible to treat two pipes with a single LP2 unit if they are close together.

LP2. 5+ Bedroom Houses

ELECTRICAL SUPPLY AND POWERING UP YOUR LP UNIT

Once you have installed your Little Plumber it will need some power (unless you purchased the SOLO unit). Simply plug it into a nearby outlet if one is available. If there isn't a nearby plug you can run an extension cord.

IF YOU HAVE ANY DOUBTS CONSULT A QUALIFIED ELECTRICIAN!

Your LP unit is supplied with a 110v/9v adapter. Simply plug the adapter into the outlet or extension cord and connect the other end into the side of the LP unit.

The output LEDs on the units only flash when both ends of the aerials are plugged in. If the LP2 is powered up with both aerials already plugged in the output lights will flash simultaneously.

Please, please remember that you should have your Little Plumber on at all times so make sure that you plug it into a socket that isn't to be turned off - if Little Plumber is winking he's working, if he's not he isn't.

SOFT WATER BENEFITS ALL ROUND THE HOUSE! WITH LITTLE PLUMBER ALL READY TO GO

It has been reported by the U.S. government that consumers save a MINIMUM of 48% on their energy costs with the elimination of 3/8 of an inch of limescale build up. So a family of four can save over \$600 a year with the removal of costly pipe clogging limescale.

What will I notice?

- i) Removal of scale and stains in showers, baths and basins.
- ii) Softer smoother skin from softer water.
- iii) Better tasting, less smelly water (for really great tasting tap water fit a Little Plumber water filter).
- iv) Disappearances of dry skin, eczema and psoriasis have been reported.
- v) Increased hot water pressure and hotter water.
- vi) Softer, silkier hair.
- vii) Cleaner clothes after washing and less powder use.

All this without chemicals or the removal of essential minerals in your drinking water.
